1 Million Project (1MP) – Hotspot Quick Start Guide

Congratulations on receipt of your 1MP wireless internet device. Fort Worth ISD is proud to be partnering with the 1MP Foundation to provide our district students with free internet access. As a reminder, students participating in this free offering must meet the minimum data requirement of utilizing 50% of their monthly data allocation (10Gb) in order to remain eligible for the program. For full details about the 1MP program along with frequently asked questions and additional 1 MP hotspot device resources, please visit https://www.fwisd.org/Page/6550

Important Startup Information

Before utilizing your new Hotspot for the first time, please assemble the device completely (if applicable) and charge it for a minimum of 2-3 hours. When you start the Hotspot for the first time, it may take up to 5 minutes for the device to complete its initial network activation. Your Hotspot wireless name (SSID) and password will either be displayed within the onscreen display or it can be found on the inside of your Hotspot battery cover. Both the network name and password can be changed by the student to something personal and easier to remember if they would like to do so.

Hotspot Devices

Students are randomly assigned 1 of the 2 Hotspot devices shown below by the 1MP Foundation. Device directions are provided within the box. **Students need to keep their box** as the label provided on the outside of it is needed when contacting 1MP support, in the event you have connectivity issues initially or down the road.
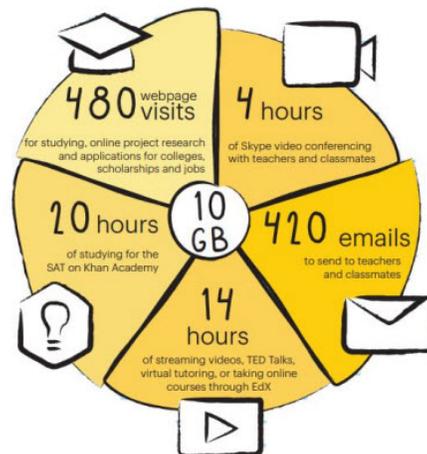

ZTE Warp Connect

2300 mAh Battery
Connects up to 10 Devices
4.6" x 2.6" x 0.57", Weight 3.9 oz.
Wi-Fi 802.11b/g/n, USB, LTE

Coolpad Surf

2150 mAh Battery
Connects up to 15 Devices
4.29" x 2.64" x 0.63", Weight: 3.88 oz.
Wi-Fi 802.11b/g/n, USB, LTE

Here's what you can do with your new device and 10GB of high-speed data every month -->

Best Practice Recommendations

- Do not use your Hotspot device while at school or in locations where free internet is available, you want to conserve your data when possible.

- Store your Hotspot in a secure location and remember to turn it off while not in use.

- Label your Hotspot device. If you lose it, you might get it back and avoid fees if it has your info on it.

- Limit how many devices at home connect to your Hotspot, more devices = less data for school work.
