2ND AND 3RD GRADE

Recently, our second and third-grade students had the opportunity to read the book "One Word for Kids." This book inspired them to set three short-term goals that they can achieve at their current age. It is wonderful to see our students taking charge of their own growth and development. While setting goals is important, it is equally important to recognize the obstacles that may come in the way. Our students have been reflecting on the ways they sometimes "step on their own feet" when trying to achieve their goals. By identifying these challenges, they are better equipped to overcome them and stay on the path to success. In addition to goal setting, our students have chosen one positive word that they will use throughout 2024. This word will serve as a guiding light, helping them be their best selves and stay focused on their goals. It is inspiring to witness our students embracing positivity and personal growth.

4TH AND 5TH GRADE

Practicing Engineering!
Our 4th and 5th grade students are practicing professionals. Electrical engineering is a technical discipline concerned with the study, design, and application of electricity! Electrical engineers design, develop, test, and supervise the manufacture of electrical equipment, such as electric motors, radar and navigation systems, communications systems, or power generation equipment. Electrical engineers also design the electrical systems of automobiles and aircraft. We are so proud of our Gifted and Talented students.
