

Open an Incognito Window in Chrome

Overview

An incognito window removes previously stored log-in information from the Chrome browser, which can be helpful when sharing a device. Log-in information, cookies and site data, or information entered into forms will not be saved when using an incognito window. However, files you download and bookmarks you create will be saved. Using an incognito window does not hide your activity from FWISD.

Open an Incognito Window in Chrome

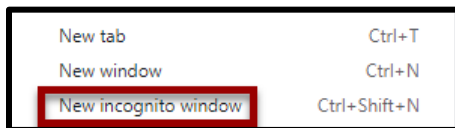

1. Open **Chrome**.

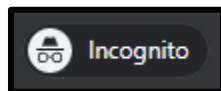

2. Click **More** (3 dots) in the top right corner.

3. Select **New incognito window**.

4. A new window appears. Check for the **Incognito icon** in the top right corner.

Alternate Method

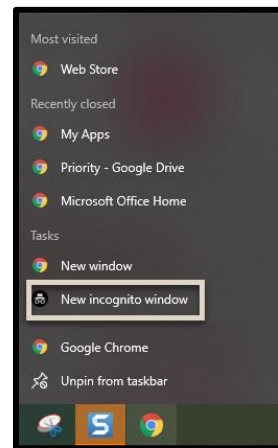

1. Open **Chrome**.

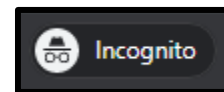

2. Right-click the **Chrome icon** in the taskbar.

3. Select **New incognito window** from the list.

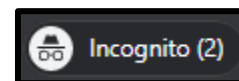

4. A new window appears. Check for the **Incognito icon** in the top right corner.

End Incognito Browsing

Incognito mode runs in a separate window from your normal Chrome windows. If you have an Incognito window open and you open another one, your private browsing session will continue in the new window.

If you see a number next to the Incognito icon at the top right, you have more than one Incognito window open.

To exit Incognito mode, close all Incognito windows.
