

# How to Clear the Cache and Cookies in Chrome

## Overview

When you use a browser, such as Chrome, it saves some information from websites in its cache and cookies. Clearing them fixes certain problems, such as loading or formatting issues on sites.

## Clear Cache and Cookies

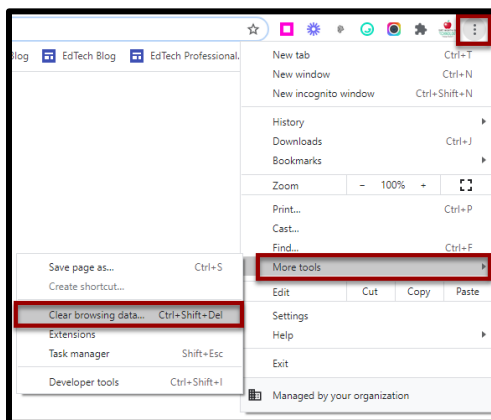

1. Open **Chrome** on your computer or Chromebook.

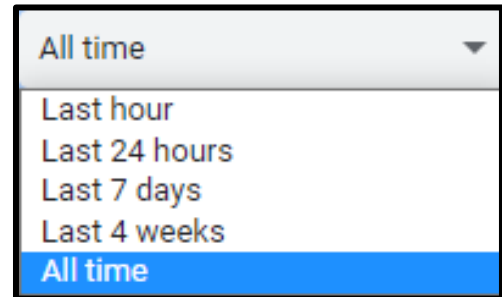

2. Click **More** at the top-right corner.

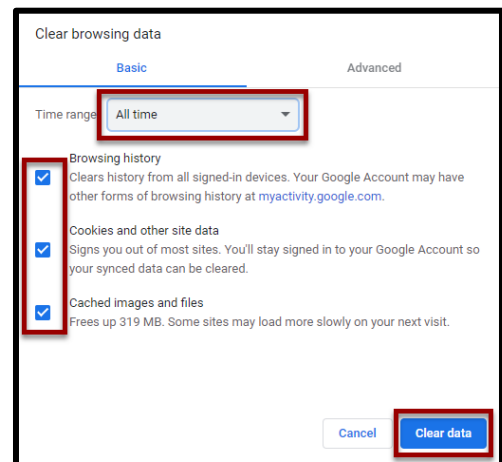

3. Click **More Tools**, then **Clear browsing data**.

4. At the top, choose a **Time range**. To delete everything, select **All time** from the drop-down menu.

5. Check the boxes next to **Browsing history**, **Cookies and other site data**, and **Cached images and file**.

6. Click **Clear data** in the lower-left corner.

After you clear cache and cookies:

- Some settings on sites get deleted. For example, if you were signed in, you'll need to sign in again.
- If you turn on sync in Chrome, you'll stay signed into the Google Account that you're syncing to in order to delete your data across all your devices.
- Some sites can seem slower because content, such as images, needs to load again.
